

CHURCH HOIST

Lighting Suspension for angles fixing applications

Mod. 8560

FEATURES

The new Mini Hoist for Gable Roofs allows to preserve architecturally the visual impact of the building, occupying a minimum space when fully raised and aligning parallel to the angled support.

The Lighting Batten goes from an angled position (parallel to the gable roof) when fully raised down to a position parallel to the floor when fully extended, to facilitate the access to the lighting fixtures.

Special load centering clamps with bottom receivers are provided to hang lighting fixtures and avoid any varying loads to the moving batten while raising lowering.

- Max 25° admitted angle of the gable roof support
- Self aligning top support
- Self aligning lighting fixture supports
- Compact overall closed dimension 0,60 m. and light weight
- Net extension up to 10,5 m. For 12,5 m. max supports
- Height 100 kg. net lifting capacity
- Silent operation
